

Introducing the all new Single Mix **EpoxyOne** Grout & Adhesive

Easy Clean-up

Very easy to clean, EpoxyOne used as a grout, will wipe right off the tiles with just a wet sponge and the weight of a finger.

More Coverage Per Buck

Coverage per unit is exceptional since EpoxyOne is cleaned off tiles very easily and efficiently with just your float. This allows you to place more grout in the joints, where it is supposed to be, leaving less sponge cleaning or wasted Epoxy.

No Flow Cycle

The worlds first and only non-sagging epoxy grout system. EpoxyOne does not have a flow cycle. This means the grout joints will not sag or flow out after installation, causing much wasted time and effort correcting joints.

100% SOLIDS EPOXY

RESIN CATALYST

Single Mix

EpoxyOne is a new revolutionary single mix component Epoxy with the Resin and Catalyst combined into a single liquid. This keeps the two important ingredients always in exact proportion allowing the applicator to use any amount needed from a few ounces to the entire unit. There is no exact measuring required and Damp Sand is the only other ingredient mixed with the EpoxyOne Liquid.
