

Introducing the all new Multi-Purpose **Kaiser Gel Mastic**

No Slipping

We know that top down setting can save you a lot of time and labor. That's why when it comes to a non-slip mastic you need look no further. Set the tile where you want it and that's where it stays.

Dries Clear

Just think about it. No more worrying about whether the mastic color might show up in your joints, or distort the intended effects of glass tiles. This advantage clearly keeps the mastic out of sight, out of mind.

Superior Strength

Straight out of the bucket, Kaiser Gel Mastic gives you more than twice the strength required by ANSI specs. Add grout or a sand and cement mixture to convert the mastic to a latex modified dry set mortar and you will have bonding that is second to none. So now you can set your wall tiles, floor tiles and fixtures and move on without worrying whether the bond will leave you hung out to dry.

Dual Purpose

With the new Kaiser Gel Mastic technology, you can set wall tile, floor tile and fixtures with one easy to use product. Use the mastic straight from the bucket for setting ordinary wall tiles. Adding any available grout or a sand and cement mixture to produces a super strong latex modified dry set mortar, excellent for setting large wall tiles, floor tiles, soap dishes, towel bars, etc.

Long Open Time

Mastic open time can make the difference between a productive or unproductive day. With Kaiser Gel Mastic, open time of over two hours is not unusual, even in low humidity. As many as ten bathtub surrounds have been troweled before any tiles were applied to the walls. And, more open time means less frequent tool washing, allowing tile setters to be more productive at what they do best - setting tile.

Superior Coverage

When it comes to more adhesion for the buck, we've got you covered. No other mastic in the world even comes close to the amount of coverage Kaiser Gel Mastic provides. Superior adhesion, allowing use of a smaller notch trowel, and the creamier texture all contribute to improved coverage.

Save Time, Labor and Money

Unique and innovative characteristics and properties of Kaiser Gel Mastic reduce application and tile installation time by 50% over conventional mastics, substantially cutting overall costs.

Light Weight

Weighing only 8.4 lbs per gallon, Kaiser Gel Mastic is creamier and approximately half the weight of conventional old fashion mastics, making it easier to apply and carry. Conventional mastics are 50% to 70% "fillers". Kaiser Gel Mastic contains no "fillers" at all, making it easy to spread, much like whipped cream.
